

No application file

Get started with your gradio Space!

Your new space has been created, follow these steps to get started (or read the full [documentation](#))

Start by cloning this repo by using:

HTTPS

SSH

Use an [access token](#) as git password/credential

```
# When prompted for a password, use an access token with write permissions.  
# Generate one from your settings: https://huggingface.co/settings/tokens  
git clone https://huggingface.co/spaces/Michael-Onyebuchi/brain-tumor-classification-detection
```

PowerShell

uv

uvx

```
# Make sure the hf CLI is installed  
powershell -ExecutionPolicy Bypass -c "irm https://hf.co/cli/install.ps1 | iex"
```

```
# Download the Space  
hf download Michael-Onyebuchi/brain-tumor-classification-detection --repo-type=space
```

Create your Gradio app.py file:

```
import gradio as gr
```

```
def greet(name):  
    return "Hello " + name + "!!"  
  
demo = gr.Interface(fn=greet, inputs="text", outputs="text")  
demo.launch()
```

Then commit and push:

```
$ git add app.py  
$ git commit -m "Add application file"  
$ git push
```

Hint Alternatively, you can [create the app.py](#) file directly in your browser.

Finally, your Space should be running on this page after a few moments!

Dependencies

You can add a `requirements.txt` file at the root of the repository to specify Python dependencies

If needed, you can also add a `packages.txt` file at the root of the repository to specify [Debian dependencies](#).

The `gradio` package is pre-installed and its version is set in the `sdk_version` field in the `README.md` file.

Personalize your Space

Make your Space stand out by customizing its emoji, colors, and description by [editing metadata](#) in its `README.md` file.

Documentation

Read the full documentation for Gradio Spaces [here](#).
